WEEKLY CONNECTIONS

Central Bank Digital Currencies (CBDCs) and Cross-Border Payment Architecture

WEEKLY · 03-15

> You follow monetary policy and geopolitics closely, but haven't engaged with how CBDCs are reshaping international settlement systems—particularly China's digital yuan pilot programs with BRICS+ nations and how this challenges dollar dominance outside the tariff/trade war frame you're tracking. *Add:* BIS Quarterly Review (Bank for International Settlements) for technical monetary architecture analysis, and Carnegie Endowment's commentary on the geopolitical dimensions of payment system fragmentation.

DISAGREE

I think these are a threat to credit card industry, but also a way for the US to sell more treasury bonds to the crypto industry. I am skeptical that the yuan or euro digital currencies make any difference. Everything is really digital already. The innovation I think is to prevent bitcoin and crypto to usurp national currencies.
