

Spec — Gespräche: Deferred Analysis

Created: 2026-06-18 — Claude.ai Status: Ready for working/ Priority: High — enables multiple sessions before analysing

Context

Currently tapping Beenden ends the session but does not save the transcript automatically. The user must then manually tap Analysieren to get feedback. This forces a decision after every session and prevents doing multiple sessions in a row without stopping to review.

Robert's workflow: do 2-3 sessions (Path A or Path B), then analyse at the end when convenient. Analysis should be available but not forced.

Change

On tap Beenden

1. Session ends — VAD stops, TTS stops
2. **Transcript auto-saves to session state** — immediately, no tap needed
3. A compact session card appears above Nach der Sitzung:

✓ Maria · Runde 1 · 8 turns · 3m 20s

[Analysieren →]

4. **Analysieren is available but not required** — tap it when ready, skip it to start another session
5. **Neue Sitzung is immediately available** — one tap, same persona, fresh session. No need to analyse first.

Multiple sessions

If Robert does 3 sessions before analysing:

- Three session cards stack above Nach der Sitzung
- Each has its own [Analysieren →] button
- Analyse in any order, at any time

- Cards collapse to a summary row once analysed: " ✓ Analysiert — Maria · 3m 20s · [anzeigen]"

Nach der Sitzung (transcript paste panel)

The paste panel (built previously) remains unchanged. It serves the external model workflow — paste a transcript from Grok or any other model and analyse it. This is separate from the auto-save above.

The session cards (from KI-Sitzung) and the paste panel (for external transcripts) coexist in the Nach der Sitzung section. Session cards appear first (most recent at top), paste panel below.

Session card design

- Parchment background, amber left border
- Single line: ✓ [Persona] · [Runde X] · [N turns] · [duration]
- [Analysieren →] button right-aligned, amber, 44px touch target
- [X] delete button left of Analysieren — muted, smaller
 - Tap [X]: confirm dialog "Diese Sitzung löschen?" with [Löschen] / [Abbrechen]
 - On confirm: card removed, transcript discarded, not analysed
 - Use case: bad take, false start, session not worth keeping
- Collapsed state after analysis: muted, "anzeigen" to expand feedback
- Card persists until page reload or Neue Sitzung (whichever clears it)

What does NOT change

- Analysieren API route — unchanged, same output format
- Feedback display (FEEDBACK / FEHLER / STÄRKEN / SCHWÄCHEN) — unchanged
- The transcript paste panel — unchanged
- Letzte Sitzungen section — unchanged

Definition of Done

- Beenden auto-saves transcript to session state — no tap needed
- Session card appears immediately after Beenden with correct metadata (persona, turns, duration)
- [Analysieren →] on session card triggers analysis and renders feedback correctly
- Neue Sitzung available immediately after Beenden without requiring analysis first
- Multiple session cards stack correctly (test with 3 sessions)

- Session cards and paste panel coexist without layout conflict
- Analysieren button on card: 44px minimum touch target on mobile
- Verified: complete 2 sessions back-to-back without analysing, then analyse both — feedback correct for each
- [X] delete on session card: confirm dialog, card removed on confirm
- Delete does not affect other session cards
- No regression on existing Analysieren flow

Commit

Gespräche: deferred analysis – auto-save transcript on Beenden, session card with optional Analysieren, Neue Sitzung without wait.
