

Spec — Gespräche: KI-Sitzung Mobile Tuning

Created: 2026-06-18 — Claude.ai Status: Ready for `_working/` Priority: High — makes Path B (in-page API session) usable on mobile

Context

The KI-Sitzung (in-page API conversation) works on desktop but the mobile layout hasn't been tuned. On a 390px viewport the session area, suggestion pills, transcript, and controls need to be rethought for one-handed use. Voice is the primary input but text must be available as a fallback — sometimes voice isn't practical.

Path B (in-page session) is the no-switch alternative to Path A (external model). Both should feel equally comfortable on mobile.

Changes

2.1 — Session area layout on mobile

When `.session-active` is active on mobile ($\leq 768\text{px}$):

- Persona description, action buttons, MODELL selector, Heutige Vorbereitung all collapse (already specced in consolidated layout pass)
- Session area takes full width of screen
- Transcript box: full width, `min-height: 200px`, scrollable, `font-size: 16px` (no Safari auto-zoom)
- Timer and status line (● Aufnehmen / 00:00) pinned at top of session area — always visible while scrolling transcript

2.2 — Suggestion pills on mobile

Currently pills are small and hard to tap on mobile. In session-active mode on mobile:

- Pills reflow to full-width rows (not horizontal scroll)
- Each pill: full width, `min-height: 44px`, amber border, parchment bg
- Tapping a pill sends it as a conversation turn (already specced) — confirm this works on mobile touch
- Maximum 3 pills visible — "Mehr anzeigen" expands if more exist (prevents pills from dominating the screen)

2.3 — Text input fallback

When voice is not practical (quiet zone, public transport, preference):

- A "Tippen" toggle appears below the mic button during a session
- Tap "Tippen" → text input appears, mic hides
- Text input: full width, `font-size: 16px`, amber border on focus, "Senden →" button below
- Tap "Sprechen" to return to voice mode
- Both modes produce the same turn — routes through same `sendTurn()` function, no backend change

2.4 — Mic and end-session controls

On mobile the mic pulse and Beenden button must be large enough to tap confidently during a live session:

- Mic indicator: `min-width: 48px`, `min-height: 48px`
- ■ Beenden button: full width on mobile, `min-height: 52px`, amber fill — the primary action, deserves the most space
- "Denkt nach..." indicator visible during AI turn — already specced, confirm it renders correctly at mobile width

2.5 — Transcript readability during session

- Each turn clearly labelled: "Maria:" / "Sie:" with amber/muted color distinction
- Font size: `16px` minimum
- Auto-scrolls to latest turn
- Transcript does not jump or reflow when new turns arrive

Definition of Done

- Session area takes full width on mobile when `.session-active`
- Suggestion pills are full-width rows, 44px+ touch targets
- "Tippen" toggle available during session — text input works, sends turn, same output as voice
- Beenden button is full-width, 52px+ height on mobile
- Transcript auto-scrolls, font $\geq 16px$, turns clearly labelled
- "Denkt nach..." indicator visible during AI turn on mobile

- No regression on desktop layout
- Verified on: iPhone Safari, iPhone Chrome, Samsung A36 Chrome
- Full loop tested on mobile: voice turn → AI response → text turn → AI response → Beenden

Commit

Gespräche: KI-Sitzung mobile tuning – full-width session area, pill reflow, text input fallback, larger touch targets.
