

Spec — Gespräche: Prompt Kopieren Button

Created: 2026-06-18 — Claude.ai Status: Ready for working/ Priority: High — unblocks Path A (external model workflow)

Context

The current button row in Gespräche has "Telegram öffnen" which copies the session prompt AND opens Telegram. This couples two actions that should be independent. Robert now has a mobile web interface, so the mandatory Telegram step is no longer needed for the copy-and-paste workflow with external models (Grok, Claude, Gemini, ChatGPT).

Telegram stays as a first-class channel — notifications, commands, voicemail-style sends. It's infrastructure-independent and always-on. But it should not be mandatory in the prompt-copy flow.

Change

Current button row

[▶ Sitzung starten] [→ Telegram öffnen] [□ Kopieren] [📄 Als .txt]

New button row

[▶ Sitzung starten] [📄 Prompt kopieren] [→ Telegram] [📄 Als .txt]

"Prompt kopieren" button (new / replaces existing Kopieren)

- Copies the formatted session prompt to clipboard — one tap
- No app opens, no redirect — just copies
- Shows brief inline confirmation: "Kopiert ✓" for 1.5s
- Works on iPhone Safari, iPhone Chrome, Samsung A36 Chrome
- Requires HTTPS (app.minimoi.ai) — works on portal, not localhost
- If clipboard unavailable: show "Manuell kopieren" note, focus the prompt textarea so user can select-all and copy manually

"Telegram" button (renamed, behaviour unchanged)

- Same as current "Telegram öffnen" — opens Telegram with prompt
- Label shortened to "Telegram" — cleaner on mobile
- Keeps its place in the row

Prompt editable before copying

The prompt textarea (currently read-only or hidden) becomes directly editable before the user taps "Prompt kopieren." The user sees the full prompt, can tweak it — fix a word, adjust an instruction, correct a detail — then copies. No modal, no settings screen. Just editable text in place.

- Prompt textarea is visible and editable in the resting state
- Shows the full formatted prompt: persona brief, scene, focus areas, framing
- User edits directly if needed, then taps "Prompt kopieren"
- If user makes no edits, default prompt copies as-is — no extra step
- Font size $\geq 16\text{px}$ (no Safari auto-zoom), parchment bg, amber border on focus

What the prompt contains (default, editable):

- Persona name, role, and scene brief
- Today's preparation / focus areas (Heutige Vorbereitung if filled)
- Any suggestion pills selected
- Standard session framing

Note — gender/persona settings: The prompt currently reflects the persona file as written. Allowing gender overrides or persona-level tweaks requires changes to the persona file structure — this is a separate design session, not part of this spec. For now, the editable textarea gives Robert manual control: he can edit the prompt directly before copying if he wants to adjust any detail including gender references.

Mobile layout

On 390px viewport the four buttons must not overflow. Options:

- Two rows of two buttons (preferred — larger touch targets)
- Single row with smaller text (acceptable if all fit at 44px height)

Check current button row width at 390px before deciding. Match whatever pattern the existing layout uses for overflow.

Definition of Done

- "Prompt kopieren" copies prompt to clipboard on tap
- "Kopiert ✓" confirmation shows for 1.5s then clears
- "Telegram" button retains all existing behaviour
- Four buttons fit correctly at 390px — no overflow
- All buttons meet 44px minimum touch target height
- Clipboard unavailable: graceful fallback shown
- Verified on: iPhone Safari, iPhone Chrome, Samsung A36 Chrome

Commit

Gespräche: add Prompt kopieren button independent of Telegram. Decouples prompt copy from Telegram for multi-model workflow.
